QUALITY AND TRADITION

Gorenje has been producing high-quality home appliances for over 60 years. It is committed to the development of own technologies and to continuous improvement of its production processes. Drawing on Slovenian tradition and European values, Gorenje remains among the leading home appliance manufacturers in Europe. We are proud of every product that leaves our factories as we are aware that it was produced and tested to meet the stringent European environment protection standards.

PERSONAL FACTORY OF PERFECT TASTE

Ovens

Every Gorenje oven is a little wonder factory. A thousand physical processes take place in it, all controlled and perfectly coordinated to the end result - delicious food. Years of ambitious research into the physics behind baking, roasting and steaming have led to a wide range of features and functions that offer a unique cooking experience. These ovens are helpful personal assistants with a talent for details: an innovative shape that distributes hot air evenly, a monitoring device that cooks meat to perfection, a steaming tool that brings in just enough moisture. There are many interesting configurations to choose from, all of which are exceptionally user-friendly.

HomeMade shape
All the qualities of baking in wood-burning ovens

The characteristic rounded shape is one of the most beneficial features of Gorenje ovens. Inspired by traditional wood-burning ovens, it enables hot air to move around freely. Since the food is heated evenly and from all sides, it is always perfectly done: crispy on the outside and juicy on the inside. Combined with the MultiFlow 360° ventilation system, it makes baking on all 5 levels possible.

MultiFlow 360°
All sides are good sides

MultiFlow 360° guarantees the optimal circulation of heat within the oven. Due to smartly positioned ventilation openings on the back wall and the unique round shape, air is spread evenly throughout the oven. The fan pushes hot air around the entire oven volume, making the food perfectly baked on all sides. The dynamic air movement allows simultaneous baking on many levels without smells and flavours mixing together.

Multi-level baking
Many dishes in one go

Combination of MultiFlow 360° and HomeMade shape helps reach the toughest objective: preparing five trays of dishes at once. The good news is: the flavors and smells don't mix. Smart air distribution ensures that the food is evenly baked on every level. Since the oven volume is larger, the overview is excellent as well. Superior models enable arranging the baking trays on five different levels.

AutoProgrammes
Select, touch, done

Gorenje ovens provide fully automatic cooking programme with over 80 recipes to choose from, ideal for beginners. The secret of auto mode is quite simple – all the parameters such as time, temperature, heat, are automatically set. All that the user needs to do is choose the dish type and weight and press start. The oven will do the rest.

Step by step
Perfect food in 2, 3 or more steps

Cooking in phases is achieved by manually programing the many steps of the baking process. Throughout all the steps of the automatic cooking process there is no need to change the settings manually. It is also ideal for more experienced users and for dishes like bread and lasagne, which need temperature changes.

SilverMatte
Ultra resistant, ultra smooth coating

Enamel quality and type are exceptionally important for the oven and its operation. SilverMatte is a highly resistant and strong material that can stand extreme heats, even pyrolytic cleaning at 500 °C. Free from micro pores, it coats oven surfaces and baking trays, making them resistant to the highest temperatures, microwaves and steam. The triple coating of the interior supports heat reflection and provides additional insulation. Therefore, the oven interior always stays sterile and safe.
PyroClean
Premium self-cleaning function

Pyrolytic cleaning is the most efficient and advanced way to clean an oven. The high cleaning temperature of up to 500℃ leaves the oven completely clean, without a spot of grease. Gentle cleaning is over in 90 minutes, medium intensity cleaning ends in 120 minutes, while very intensive cleaning takes only 150 minutes where the effect is according to the duration. At the end, only the leftovers need to be wiped away. The oven is locked during and immediately after the cleaning process, which makes it family-friendly.

CataClean
A surface that stands no grease

Catalytic cleaning represents a great assistance in oven maintenance. When the oven reaches 85℃ or more during the baking process, catalytic panels automatically start absorbing the grease and impurities.
AquaClean
Simple, casual cleaning

Due to completely new enamel in all lines of new Gorenje ovens, AquaClean function has been significantly improved. AquaClean offers great assistance in cleaning of the oven cavity. All it takes is to pour half a litre of water into a baking tray and turn AquaClean on after each baking. In just 30 minutes, the results are visible on the entire surface and the baking trays. Stains and grease are softened and can be wiped away more easily and the oven stays spotless.

BigSpace
More space for greater cooking freedom

The new generation of Gorenje ovens conceals a shape within the upper part. Now the optimised airflow circulates inside at an even greater volume, circling completely freely. The increased capacity allows preparation of larger baking trays and larger quantities of food, while their outside dimensions remain the same. Instead of the previous 3, the Superior oven now enables using 5 levels at the same time. Capacities range up to 73l in standard ovens and up to 50l in microwave ovens, which is amongst the largest available on the market.

GentleClose
Super easy and super silent

Only a soft touch is needed to close the oven door smoothly, without any noise.

Dehydration
Great food, always at hand

Dried fruit, vegetables, herbs and meat can be easily prepared at home. Dehydration is possible on up to 5 levels at the same time, which saves time and energy.

Yoghurt
A simple way to healthy stuff

A special function enables healthy yoghurt to be prepared at home. Automatic temperature and time settings provide optimal conditions that create homemade yoghurt in around 3 hours.

DC+ System

The DynamiCooling system efficiently cools the oven exterior (or housing) to prevent any damage caused by high temperature. In ovens with the DynamiCooling+ system, the heat sensors regulate the cooling of the oven exterior walls until they reach a temperature of 60 °C. This is particularly convenient in ovens with the pyrolytic cleaning function which works with extremely high temperatures.

UltraCoolDoor

Special triple or even quadruple glazing isolates the oven, making it even safer for children and pets. The heat is kept inside, optimising energy consumption by stopping heat escaping from the oven.

SuperSize

More spacious ovens allow you to cook a larger quantity of food – not only because of even air circulation at all levels, but also because of the 46cm wide baking trays in both standard and compact ovens. Innovative solutions allow a larger interior and the oven width is fully used. There is more space on each baking tray and the superior technology makes sure the food is cooked evenly on all levels.

TelescopicGuides

Smooth running telescopic guides provide a perfect overview of the process on all levels. This means safer and easier removal and cleaning. Gorenje ovens feature fully pulled out guides on three levels in Superior line. During the pyrolytic cleaning, they should be removed from the oven.

PerfectGrill

The best baking results are achieved with a combination of larger and smaller heaters, where the latter is positioned inside the larger one. The smart positioning of the grill allows optimal heat distribution and provides the ultimate baking results every time, so food is crispy on the outside and soft on the inside. A variable grill combination can use either the inner or outer heater, or both at once. In advanced models, the heater is movable for easier cleaning and maintenance.

AutoRoast

The AutoRoast function first heats the oven to 230°C. The food is roasted for 30 minutes and then the temperature drops to the set level. A smart combination of time and temperature creates ideal roasting conditions. As a result, meat is crispy and well done on the outside and perfectly soft and tender on the inside.

MeatProbe

By controlling the temperature inside the meat, the MeatProbe manages the entire process and even activates the alarm when the time is right.

TouchFree coating

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprints markings, leaving the surface always shiny and making cleaning much easier.

FastPreheat

The oven reaches a temperature of up to 200°C in just 6 minutes, saving 30 % of the time needed by standard preheating. This comes in handy for recipes that require a preheated oven. A light and sound signal informs when the temperature is right.

SlowBake

SlowBake bakes food at low temperatures for up to 6 hours. Due to the long preparation periods, meat and fish are softened but retain their juiciness, aroma and nutrients.

Different layouts and combinations

BO 547 S10X & WD 1410 X

Matching design

The Gorenje Superior line of 60cm ovens, 45cm compact ovens and coffee machine are designed to allow a number of different layouts and combinations. Regardless of whether the appliances are fitted in a column, in a row, square, or in a T-shape, they will endow your kitchen with a new sense of harmony and offer total alignment of the fascia panels and handles between all of the "Superior Range" models.

A MULTI-TALENTED OVEN

Microwave ovens

A microwave oven is an indispensable tool in any modern kitchen. It allows preparing tasty and healthy food to support you in your life on the fast lane. Advanced technology makes sure the food is evenly thawed or heated. In addition to microwaves, these appliances also allow cooking with grill or hot air.

Thus, a built-in microwave oven can also be used as a conventional oven. Needless to say, they are equally impressive on the outside. They are designed to match the rest of Gorenje's built-in family of appliances.

BO 747 S30X

BCM 547 S12X & WD 1410 X

Inverter Technology
Gentle treatment for tastier food

Because of Inverter technology the energy is evenly distributed instead of pulsating. As a result, the food retains its initial structure, including its vitamins, minerals and fibres. The advantages of the even energy distribution are particularly welcome when reheating or defrosting, and when cooking liquids. The overall microwaving time is shorter, which lowers energy consumption as well.

Stirrer Technology
Trays of all sizes are welcome

The Stirrer technology permits a standard-size baking tray to be placed in a microwave oven. The oven's entire width is used, saying goodbye to conventional turntables and uneven heating. The advanced microwave distribution system heats the food uniformly across the entire volume.

NOTHING BUT PLEASURE
Coffee machines

Perfect coffee is a serious challenge. Coffee beans need to be ground carefully, water temperature and the pressure needs to be set with precision, milk has to be warm enough and foamed to perfection. Nevertheless, a coffee cup shouldn't be cold either. Gorenje coffee machines will make mornings more enjoyable. Thought out coffee making process will extract the optimal flavour and create the enchanting smell that will bring a perfect start of the day.

READY TO USE
NORMAL TASTE

gorenje

PerfectCoffee
Favourite flavour and amount

Flavour intensity of your coffee can be adjusted using the touch controls and the LCD display. Five flavours are available: very mild, mild, normal, strong, and extra strong. Moreover, the amount can also be set: small, medium, large. The combination of flavour intensity and amount can be stored as a preset programme. You favourite cup of coffee will thus be a touch of a symbol away. Alternatively, the appliance can ne used to quickly dispense hot water for tea or other beverages.

GrindingLevels
From dark beans to aromatic coffee

Coffee tastes best when made with freshly ground coffee beans. Gorenje coffee machines offer 9 different grinding levels, from super fine to extra coarse. The leftover pulp is automatically dispensed.

CoffeeBean
Easy mornings

The coffee bean container is easily accessible as it can be pulled out. When needed ground coffee can also be used instead of beans. When the machine runs out of coffee beans, a warning will appear on the display.

EasyMilk
Creamy milk foam always at hand

Gorenje coffee machines feature a large milk container for cappuccino or latte, both can be prepared with desired amount of milk. A large milk container allows several cups of hot milk to be made without the need to refill. It is easily removable and can be simply pulled out and stored in the refrigerator until the next time you need it.

AutoCappuccino
From cappuccino to latte, in a second

The AutoCapuccino feature forces the water through ground coffee beans in a way that extracts the full aroma and creates truly genuine flavour. The desired level of milk foam can be set.

Warming Drawer
Staying perfect for the latecomers

The warming drawer can be positioned underneath a coffee machine or a combined microwave oven. The drawer can be used to heat up tableware, reheat food, or keep the food and beverages deliciously warm for any given time.

PERFECT TASTE

Hobs

We all want to cook like professionals, impress our guests and serve healthy meals to our families. Usually, this means special knowledge or professional equipment. Gorenje hobs are designed as easy-to-use tools that enable everyone to cook with great results. Induction hobs, ceramic hobs and gas hobs are all equipped with features that make cooking effortless.

IQcook induction hob
Smart cooking

Thanks to the cooperation between IQ sensor on the lid and the sensor inside the induction bottom of the IQcook, you are able to cook completely automatically. Wireless communication between the pot and the hob actually controls the procedure, providing fully automatic cooking on one, two or all four cooking zones.

>> POWER BOOST

IQ 634 USC

80% faster

40% energy saving

100% healthy meals

100% sensor controlled

100% automatic cooking

IQsteam
Vitamins stay in

Cooking with a small quantity of water preserves vitamins, minerals and natural colour of vegetables. Believe it or not, all it takes to prepare 1kg of vegetables is 50ml of water.

IQpro
A cooking marathon, made incredibly easy

IQpro offers a simple way to prepare dishes that require longer cooking times with slow warming up or cooking at a lower, constant temperature. Ideal for cooking dishes such as goulash.

IQpoach
Exactly the right temperature

IQpoach keeps the temperature between 71 and 85°C and prevents overcooking. Food retains its natural colour, juices and flavour. The specific and constant temperature is ideal for recipes such as poaching an egg.

IQgrill
Perfectly grilled steak

IQcook makes grilling thrillingly simple, even with very little or no oil. It prevents food from burning with 3 different levels of crispness. A simple way to the tastiest and healthiest barbecue ever.

IQboil
No drop leaves the pan

Fast water boiling and constant temperature maintaining can happen without a drop being boiled over. Feel free to watch TV and relax, because your kitchen is safe and sound.

Induction hobs

Induction hobs heat up twice as fast as Ceramic hobs, which makes them comparatively more economical and safe. An induction hob only heats the bottom of the pan while the remaining hob surface stays cool and always safe to touch. Temperature is adjusted instantly, by a simple touch, limiting the danger of boiling over. With such a hob melted chocolate, sophisticated sauces and other temperature-sensitive masterpieces become just a simple task.

Fast and Economical

Time required to heat 2 l of water at 15° C to 90° C.

Gorenje induction with PowerBoost Supreme function	4.2 min
Gorenje induction with PowerBoost function	5.7 min
Induction	7.1 min
Ceramic	10 min

PowerBoost Supreme
When in a hurry, don't worry

PowerBoost Supreme provides extreme heat intensity to the pot and significantly cuts waiting time. It takes just 4.2 minutes to boil 2l of water, which is extremely time-efficient. This function is found in some Superior models of Gorenje induction hobs.

PowerBoost
Cooking on fast-forward

The PowerBoost function intensifies heating, resulting in significantly less heating-up time. It takes just 5.7 minutes to boil 2l of water from 15°C to 90°C, which is half the time of regular HiLight hobs.

XpandZone
An XXL surface, for super large pots and pans

XpandZone allows cooking on almost the entire surface of the induction hob. When the XpandZone mode is activated, the cooking zones on the left or right side of the hob are combined into one extra-large cooking zone. Combined cooking zones allow more space and freedom for cooking, space for larger cookware, or space for several smaller pots or pans that can be placed anywhere on the combined cooking zone.

BridgeZone
A simple plan for super-sized pots

The induction hob with two connecting zones simplifies cooking in large-sized pots. Two separate cooking zones are bridged to form one with just a simple touch. Perfect for preparing bigger pieces of food and sides simultaneously.

FishZone
An oval cooking zone, perfect for wider pots

Some of ceramic hobs have an expanded zone called a FishZone. When turned on, the traditional round cooking zone turns into a larger and oval surface that is especially suitable for wider pots.

BoilControl

Automatically adjusts the operating power. After initially operating at maximum power, the cooking zone maintains the desired temperature to prevent boiling over or overcooking.

Timer

The countdown timer can be set for up to 99 minutes. If the optimum cooking time for a particular dish is known from experience, the timer can be set and the hob will switch off automatically when completed. A beep will signal that the food is ready.

Stop&Go

The Stop&Go function stops the cooking and continues with the same settings after being re-activated.

ChildLock

ChildLock option is excellent for those who have children at home. Leaving them in a kitchen alone has never been safer, since this option prevents them from resetting any parameters.

StayWarm

The StayWarm function keeps food at a constant temperature of 70°C until the time is right to serve the meal. The food retains its original flavour and temperature until it is served.

SoftMelt

The SoftMelt function gently melts chocolate or butter at a constant temperature of 42°C, thereby creating perfect conditions for melting, without burning.

Hob edges

SC - Bevelled hob edge

CSC - Chamfered front hob edge

USC - Chamfered front and both sides

Gas hobs

Innovatively designed Gorenje gas hob burners optimize the flame to allow faster cooking and ultimate efficiency of the use of gas. Air and gas mixture is closer to optimum than in conventional burners used to date, and the use of gas and control of flame are considerably improved.

High Efficiency Burners
More heat for gas

Significantly improved gas burners provide up to 10% more efficient gas consumption.

WokBurner
Genuine Asian taste, at home

The wok burners reach a high heat very quickly, making Asian style cuisine and meals in big pots easy.

Coffee Reductor
Made for perfect morning rituals

New design features of Gorenje gas hobs include a highly practical coffee reductor, ideal for small diameter pots.
Could be purchased separately.

A HELPING HAND FROM ABOVE
Gorenje Hoods

Gorenje hoods bring two in one as they are technologically advanced tools in the form of superbly designed objects. They are a perfect companion to a modern lifestyle – they contribute to a healthier living environment, efficiently remove bad smells and work silently and reliably. Gorenje hoods are made of top quality materials and offer the best user experience whilst cooking, cleaning or simply just watching them.

AdaptAir
No smell. Just air.

Patended AdaptAir technology ensures completely even air suction over the entire hood surface. Steam, smells and impurities no longer enter the kitchen air.

Polyurethane filter
Benefits of polyurethane foam

Unique AdaptAir and aluminium grease filters are enhanced with a special polyurethane foam that eliminates up to 98% of all grease particles and other impurities. At the same time, the hood maintains its absorption efficiency.

LED light
See what you're cooking

LED lighting provides excellent and highly efficient illumination of the cooking hob and represents an important aesthetic and functional element in the kitchen. Its useful life is thirty times as long as that of conventional light bulbs, and it saves up to ten times as much power.

AdaptTech
Automatic fan operation

A special sensor, when in automatic operating mode, senses the level of impurities or steam, humidity and gases and responds suitably. It automatically adjusts the fan speed accordingly or, when it is no longer needed, even completely stops the fan.
P.A.S. System
Smart, targeted extraction with less noise

Innovative perimetric aspiration system (P.A.S.) directs its extraction power to the edges. This approach reduces energy consumption and noise at the same time. As a result air extraction is considerably more silent and efficient.

TouchFree coating
Shiney and fingerprint-free finish

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprint markings, leaving the surface always shiny and making cleaning much easier.

Timer and refresh
Always fresh and punctual

Special advantages of new Gorenje hoods include setting the timing for automatic switching off and the refresh function which is activated every hour, refreshing the air for 10 minutes.

Energy Class A+
Top energy efficiency

Combination of smart technical solutions, polyurethane filters, very efficient motors and LED lightning delivers excellent suction and up to A+.

Easy to clean
Low maintenance

Cleaning is an important factor in prolonging the useful life of your kitchen hood and its filters. Latest models feature a sensor that is able to perceive when the filter is saturated with grease particles to the extent when optimum hood performance is impaired. A light symbol on the control panel will alarm you that it is time to clean or replace the filter (for hoods with charcoal filters).

Inverter PowerDrive
Remarkable power, high efficiency

The powerful motor is brushless, which eliminates mechanical tension, friction, or wear. The results are better, power savings are higher, and the function is notably quieter.

Touch on inox
Everything is under your control

Gorenje's cutting edge sensor technology makes it possible to operate your inox hood with you fingertips. Since everything is hidden behind the inox, the whole surface remains perfectly smooth and very easy to clean.
Slider touch
Easy control

A special innovative slider enables easy and instant changes between different power levels and lighting intensities.

Matching design
Perfectly blending in

New generation of Gorenje kitchen hoods is a unique combination of optimum functionality and perfection in design. In addition to state-of-the-art technology, they boast a uniform appearance with other built-in kitchen appliances allowing them to blend in harmoniously with any interior while affording a number of different layouts.

Advantages of new hoods with smart glass design

New Gorenje hoods with smart glass design bring great visual appeal to your kitchen, along with many advantages.
High quality glass is easy to clean and at the same time offers an additional space for spices or small objects on the sides.

IHGC 963 A1XUK

SmartCurve
Better capturing steam and grease

New models of Gorenje hoods feature new innovative shape with specially curved glass which captures more steam, grease and odours as standard design hoods.

Controls

Cleverly placed above the glass surface, the controls of the hood are protected from grease and stay clean and perfectly operating for a long time. They are easy to reach and use (no bending below the hood cap), simple to clean and stay cold during the cooking.

LED-lights

Smart design and placement behind the glass surface, the LED-lights stay protected from grease and therefore require no cleaning. Simply wiping the glass below them will do the trick.

Polyurethane grease filter

These models of hoods use one big polyurethane filter which is easy to install and replace with just a simple click.

B Energy Class

90 cm | LED

- Venting with air extraction or recirculation
- Material of housing/chimney:
  Stainless steel and glass / Stainless steel
- Colour of housing/chimney: Glass and stainless steel / Stainless steel

Efficiency
- Maximum extraction rate by extraction operation: 441 m³/h
- Venting tube diameter: 15 cm

The capacity of ventilator
- Air flow by extraction version, step 1: 261 m³/h
- Air flow by extraction version, step 2: 332 m³/h
- Air flow by extraction version, step 3: 441 m³/h
- Airflow boost position (PowerBoost 1) - extraction: 650 m³/h
- Number of PowerBoost functions: 1

Control
- AdaptTech: Automatic fan operation
- Electronic control
- Control setting: Touch control on metal
- Timer function
- Number of speed positions: 3

Features
- TouchFree Inox
- Constant ventilation ReFresh
- SmartCurve
- Lamp type: LED
- On/off light switch
- Number of lights: 4
- Power of lights: 12 W

Equipment
- Filter material: Washable aluminium with polyurethane foam
- Grease filter indicator
- Number of motors: 1
- Motor type: Capacitor motor
- No return airflow flap: 150 mm

Technical data
- Max. noise level: 60 dB(A)re 1 pW
- Product dimensions (WxD): 90 × 60 cm
- Height: 560 mm
- Min. height of the chimney: 285 mm
- Max. height of the chimney: 510 mm
- Annual energy consumption: 66,1 kWh

EXTRA FRESHNESS, EXTRA VITAMINS.

NatureFresh Built-in fridge freezers

When it comes to producing food that is fresh, full of taste and rich in nutritional value, nature has always known best. It provides just the right combination of sunshine, fresh air and moisture for optimum growth and maximum flavour. That is why the new **NatureFresh built-in fridge freezers** from Gorenje mimic the natural conditions by maintaining the photosynthesis process, controlling the humidity levels and providing fresher air. Additionally, Gorenje NatureFresh built-in fridge freezers have high energy ratings, ranging from A+ to A+++ and their modular and flexible design ensures they will suit every lifestyle perfectly.

CrispZone with VitaLight and SmartHumidity
Just like garden-fresh

One of the largest fruit and vegetables bins in the market, CrispZone extends the freshness of your produce with low temperature, automatic humidity control and special light. SmartHumidity keeps the humidity in the drawer at optimum level at all times thanks to a special membrane which automatically lets out excess moisture. VitaLight maintains the natural ripening process to retain vitamins and keep freshly picked or bought fruit and vegetables fresh and crisp for a longer time.

IonAir with DynamiCooling
Keeps only the pleasant aromas

Air enriched with extra negative ions preserves taste and removes unpleasant odours, while the advanced fan system equalizes the temperature throughout the entire refrigerator and evenly distributes ionized air, ensuring any type of food can be placed on any shelf.

AdaptTech
A fridge freezer that recognizes your habits

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of how frequently you open the door. When the door is opened, the temperature suddenly rises and the food is exposed to a thermal shock which in turn causes it to perish sooner. The refrigerator continuously monitors and analyzes the way you use it. Thus, it can predict when you will open the fridge door and just before you do, it decreases the temperature by 1 or 2 °C to make sure constant temperature is maintained, ensuring the food stays fresh and full of nutrients.

NoFrost DualAdvance
Optimum double air circulation system

Intensive circulation of cool air in the freezer compartment reduces the humidity level and prevents accumulation of frost on the food and ice on the freezer walls. In the refrigerator compartment, it provides optimum food storage conditions. This leads to optimum cooling and freezing control, each adjusted to the respective processes in the two separate parts of the appliance.

- No more freezer defrosting
- Frozen food will no longer stick together.
- Quality frozen food
- Better view of the contents
- More space
- No exchange of odours between the freezer and refrigerator compartment
- Fresh food will not dry out and remain fresh longer.

FreshZone
Fresh as if straight from nature

The drawer with the lowest temperature in the refrigerator is ideal for storing meat, fish, fruit, and vegetables. It will preserve the food's freshness, aroma, colour, and flavour for much longer.

LedLight
Well-arranged and efficient

LED lighting in refrigerators provides excellent and highly efficient illumination. Its useful life is thirty times as long as that of conventional light bulbs, and it saves up to ten times as much power.

MultiAdjust shelves
Endless storage possibilites

These sturdy glass shelves can be very easily adjusted in position, inserted into the fridge or taken out, thereby allowing you complete freedom to adjust the fridge interior according to your specific needs. The tempered glass shelves are highly durable and will securely carry even larger amounts of food.

MixBox
Keep your fridge neat and tidy

This shallow drawer will store all your smaller items, like spreads, butter, fish cans and snacks making sure your fridge is organized and food doesn't stay forgotten past its due date. Its slide in-and-out function ensures easy access to its content.

FastFreeze
Rapid freezing

The FastFreeze function freezes the food at -24 °C to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting. And in case you forget, smart sensors make sure the function is switched on at the right time.

XXL SpaceBox
Enough space to store a turkey

This freezer compartment drawer is the largest in the appliance and it is ideal for storing large items like a turkey, several pizzas, or even cakes.

SuperCool
Rapid cooling after weekly shopping

The intensive cooling function drops the refrigerator temperature to 3 °C, which is lower than usual by nearly a half. Combined with large refrigerator compartment volume, this temperature is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting. And in case you forget, smart sensors make sure the function is switched on at the right time.

MultiBox
Multi-functional, practical box

The multi-purpose bin with a lid in the refrigerator door can be used for storing cheese, onions, and other food with a pungent smell. It keeps the food fresh and protects it from drying, while the silicone cover can be used as an egg or ice tray.

Deep door bottle shelf
Secure storage for bottles

Refrigerator door has plenty of storage for the largest glass or plastic bottles. A special fence holds the items in place to prevent it from moving and damage while the door is opened or closed.

Bottle holder
The right place for bottles and cans

In Gorenje refrigerators, bottles do not take up the space that could be conveniently used to store other items in the refrigerator door racks or on glass shelves; the designated bottle holder ensures optimum use of storage space.

FrostLess
Less ice, more energy saving

Improved insulation effectively reduces the accumulation of frost on the food and ice in the appliance interior. This means less tedious defrosting and a lower electricity bill.

Flat hinge
Easier door opening and closing

The heavy-duty hinge allows storing heavier items in the door bins, as well as opening the door to an angle of 115°. This allows a clearer look of the interior and makes loading the fridge and taking the food from it more convenient as the door won't keep closing. If the door is left ajar, the hinge will fully close it to save power.

Compressor featuring valve technology
Separate temperature adjustment for refrigerator and freezer

Unlike conventional single-compressor models, those featuring a single compressor with a valve allow separate temperature setting for the refrigerator and freezer compartment. Moreover, cooling for the refrigerator compartment can be switched off while the freezer compartment continues to operate.

A++
Top energy efficiency

All Gorenje fridge freezers are highly energy-efficient. Excellent thermal insulation and door sealing, inverter compressor, and electronic or mechanical control efficiently reduce power consumption. Fridge freezers with the A++ energy efficiency rating use 40% less power than those in the A class.

Side-by-side layout
The perfect couple for your kitchen

The side-by-side layout option allows you to maximise the use of available storage space within a limited surface area and fully adapt it to your needs, as you can combine different appliances (fridges, freezers and even wine chillers).

FULLY QUALIFIED TO DO YOUR JOB.

Smartflex dishwashers from Gorenje

The new SmartFlex dishwashers are inspired by modern lifestyle. Because our everyday life can be quite dynamic we created a generation of dishwasher that takes the load of your shoulders with the help of many advanced features.

The interior is designed in such a way that every dish and piece of cutlery has its place, no matter the shape or size. The baskets are equipped with highlighted movable elements and a customizable basket layout for easy loading, while the cutlery can be perfectly organized on a special tray where it can thoroughly dry out after washing. Furthermore, the SmartFlex dishwashers offer you a variety of helpful functions: a wide range of fast washing options that are among the best in the market and can take care of any load in no time, automatic opening of the door for releasing steam and letting the dishes dry out and the dissolving of bad odors through the natural process of ionization.

16 place settings
As flexible as your time will be

The SmartFlex dishwashers offer enough space for all your needs. Three baskets enable washing up to 16 place settings at a time. The fully flexible interior allows for different loading options, the use is simple and the washing effects are perfect.

15 min SpeedWash
Clean fast so you can slow down

Imagine throwing a dinner party and the dishes from the main course are cleaned in the time it takes to serve dessert. A quick 20 min programme with the SpeedWash function will do your dishes in only 15 minutes. Perfect for handling the volume of dishes created by having multiple guests in the house.

TotalDry
Takes care of itself

After the washing cycle, the dishwasher door automatically opens just slightly to let out the excess steam. This allows fresh air to reach the crockery so the washed items, like plastic dishes, dry completely. Excellent for quick drying with low energy consumption.

AutoProgramme
Party for two or twelve – the dishes will be spotlessly clean

Sometimes all you need is to give the glassware a light rinse, on other occasions your dishwasher is full of heavy dishes left over from Sunday lunch. The advanced sensor technology will always adjust your dishwashing programme to clean dishes perfectly with optimized water and energy consumption. You do not need special programmes for glass or intensive cleaning – the single AutoProgramme will adapt to all your needs.

ExtraHygiene
Always a clean baby bottle

This option prolongs washing time and increases temperature for 5°C which in combination with intensive programme enables temperature of 75°C, which eliminates most of bacteria. The program that mimics the sterilization process is made for families with babies, for cleaning baby utensils and bottles.

Total AquaStop
Do not worry about water spillage

With the AquaStop safety feature, the dishwasher can be safely left to operate at night as well as in your absence. In case of a leakage or flooding, AquaStop automatically cuts off the water supply while the pump siphons the residual water out of the dishwasher basin. AquaStop remains fully functional over the lifespan of the appliance.

Hot water connection
Higher temperature, lower consumption

Gorenje dishwashers can also be connected to hot water (max. 70 °C) instead of cold. Choosing a hot water connection cuts programme times and reduces the dishwasher's electricity consumption. An environmentally and budget friendly solution for your family.

SmartControl
Simple and intuitive

Navigating your dishwasher has never been easier. All the controls are located at an ergonomic position with a straightforward left-to-right logic of operation. While all models excel with the white LED display, some of the more advanced models are also enriched with touch control. Just one touch is enough to start the dishwashing process.

Status LedLight
Always in control

The special LED lamp installed on the lower part of the dishwasher door constantly indicates the current stage of the dishwashing program. That way you always know whether you can safely add dishes or if your dishwasher is in intensive washing state, whether the drying process has already started or if the washining cycle is over.

SuperSilent
No louder than a whisper

The most silent dishwashers operate at declared noise level of 45 dB which is equivalent to a whispering conversation of two persons. The silent operation comes as a result of special sound insulation, efficient motors, high-quality materials and innovative solutions of the dishwashing system.

MAGICALLY SIMPLE. SIMPLY BEAUTIFUL.

Just as a magician produces an illusion by the sleight of his hand, so you can flambé with the greatest of ease. Everything is possible with the new collection of kitchen appliances created by the famous French designer Ora Ïto. They are simple, intuitive and integrate the best that technology has to offer. To top it all off they are visually stunning and convey a 'wow' effect – whether you choose the black or the white collection. Feel them. Touch them. Enjoy the timeless perfection of their design.

HomeMade shape
Abracadabra, perfectly baked!

Inspired by traditional wood-burning ovens, the characteristic rounded shape of Gorenje by Ora ito ovens enables hot air to move around freely. The food is heated evenly from all sides and always perfectly done: crispy on the outside and juicy on the inside.

PyroClean
And the oven is effortlessly clean

Pyrolytic cleaning is the simplest and most efficient way to clean an oven. The high temperature of up to 500 ˚C reduces all impurities to ashes, which just need to be wiped away with a damp cloth after the oven cools off. The process is absolutely safe and leaves the oven completely clean, without a spot of grease.

BigSpace
Impress with your creativity

Be the illusionist in your own home with the innovatively shaped Gorenje by Ora ito ovens, which offer increased capacity while maintaining their outside dimensions. Now the optimised airflow circulates at an even greater volume, allowing you to prepare even larger quantities of food.

MultiFlow 360°
You can do it all at once

You don't need magic powers to bake on five levels at the same time. Smartly positioned ventilation openings on the oven back wall together with the unique rounded shape guarantee optimal circulation of heat within the oven for simultaneous baking on many levels without smells or flavours mixing together.

PureSteam
No water, just steam

Thanks to the special steam generator, a cloud of pure steam is distributed all over the oven, without any drops of water that could spoil the food, making it soggy. It is also excellent for defrosting since warm steam evenly surrounds the food without creating hot spots.

MultiSteam 360°
Perfectly steamed every time

After the steam enters the oven cavity through multiple openings, a special fan distributes the steam evenly, giving the food a soft and tender feel. Just one water tank will do the trick!

StayWarm
Keeps your cooking delicous

The magic performance took longer than expected? Don't worry, the StayWarm function will keep your food at a constant temperature of 70°C and ensure it retains its original flavour until the time is right to serve the meal.

WarmPlate
Add a touch of magic to your dishes

Warmed plates prevent the loss of flavour and ensure that food tastes every bit as good as it should: from soups to pastas and steamed vegetables. WarmPlate will keep your crockery at precisely the right temperature – anywhere between 30 °C and 80°C.

Yoghurt
When you want a healthy choice

This automatic temperature and time setting will provide optimal conditions for you to conjure a healthy homemade joghurt in just a couple of hours.

PowerBoost
Make the most of your time

PowerBoost provides extreme heat intensity to the pot and significantly cuts waiting time. You will boil 2 litres of water in just under 6 minutes, giving you plenty of time to practice your magical performance.

BridgeZone
A simple plan for super-sized pots

Magically turn two separate cooking zones into one with just a simple touch. Cooking in large pots and pans has never been easier or more efficient.

BoilControl
Boiling over is now forgotten

This intelligent functions ensures the hob will supply enough power to rapidly reach the desired level, then regulates the heat output to hold the temperature at the set level. Your soup will never boil over again and you won't even have to say the magic words.

TouchControl
Everything is under your control

The microwave oven can be simply operated by touch and even locked to ensure little hands won't play with it. There are no knobs or buttons, which gives the oven a sleek look and allows easy cleaning.

AutoMenu
The magic spell for simple cooking

A number of preset programs enables even simpler preparation of certain dishes. Just select the type of food and enter its weight, and the oven will automatically adjust the power and cooking time accordingly.

SmartDisplay
One glance reveals everything

With the display that spans over the entire height of the microwave oven you will be able to monitor the cooking progress and track the time until your meal is prepared.

AdaptTech
So you can focus on the show

The hood detects the level of impurities and automatically adjusts the fan speed or even stops it completely when it is no longer needed. And you can turn all your attention to your wonderful meal.

P.A.S. System
SIlent end efficient

The innovative parametric air suction system redirects air extraction from the central part to the outer edges of the hood. This approach optimises energy consumption, reduces noise and makes air extraction considerably more efficient.

Timer and refresh
Always a fresh kitchen

The hood can be automatically switched off in 10, 20 or 30 minutes. The refresh function is activated every hour and automatically starts refreshing the air for five minutes.

COOKING WITH PASSION

Kitchen, a sacred place of love and passion for life, is a place where we create the delicious and genuine tastes of our lives. Throughout the history of mankind, kitchen has been the place where all important things happened. Ambrosial aromas of spices invite you to relive the culinary stories of the past and to create your own. Good cuisine is the recipe for a sweet and passionate life. This is embodied by the kitchen appliances of the Gorenje Classico collection available in ivory and matte black.

Ovens of the Gorenje Classico collection are graced with a rich and dynamic design with a classical touch. Soft lines extend seamlessly from the door to the oven interior, and the relief and form of the door is reminiscent of the traditional arched ovens. The perfect appearance of the oven is rounded off by the characteristic knobs, the relief handle with aged gold finish, and the classically designed electronic programmable timer. The oven boasts the advanced HomeMade baking technology and high energy efficiency.

HomeMade technology for top-notch baking results

Innovative oven interior design with smart PerfectGrill heater placement mimics the traditional wood-fired ovens. Effective circulation of hot air leads to even heat distribution and superior baking results. Fully extendible telescopic guides make placing the baking sheets in the oven much simpler and allow excellent overview of the baking process.

Always cool oven door

Oven door is double glazed with reflective glass panes. Therefore, the outer side of the door is always cool. The safe and energy-efficient door allows the oven to reach the A energy class. Interior side of the oven door has no notches or edges to allow simple cleaning.

Electronic programmable timer with analogue display

Classic analogue design of the electronic programmable timer is one of the decorative highlights of the line. It features a clock and a minute minder, and it also allows programming delayed start time and cooking end time. The clock indicates the end of the cooking process by an acoustic signal. The classical clock design with clock hands and lining in old gold colour complements the overall oven design.

Super power all over and at the same time

Classico induction hobs have the option to activate the PowerBoost on all cooking zones This gives significantly higher output power and of course great time savings!

BoilControl

Automatically adjusts the operating power. After initially operating at maximum power, the cooking zone maintains the desired temperature to prevent boiling over or overcooking.
Modern hi-light technology with a touch of classics

In addition to three hi-light heaters, the glass ceramic hob also features a heater with a double circular surface that can adapt to pots and pans of varying sizes. An indicator light for each cooking zone will remain lit until the zone surface is hot. Smooth hob surface is easy to clean and the edges are raised to prevent spilling.

Retro knobs for comfortable control

Standing by behind the aged gold finish of the characteristic classic knobs reminiscent of their old ceramic predecessors is modern technology that allows the ultimate comfort in control. The knobs are ergonomically designed for a pleasant grip.

Diamond layout

Special diamond-shaped heater layout allows better overview of the cooking process. It offers more space for large pots and pans or a wok on the two larger and more powerful heaters placed on the left and right, respectively. The form of the cast iron grid follows the functional heater layout and aesthetically rounds off the hob appearance.

Cast iron grid

Cast iron grid will improve the stability and enhance the appearance of the gas hob. The grid material makes it particularly durable and resistant to even the highest temperatures.

Single-handed gas burner ignition

Single-handed gas burner ignition is another feature that leads to extra comfort and easy control. To activate the gas burner, just press the knob and rotate it to desired level with a single hand while your other hand is free. Fast and simple!

Wok gas burner

Professional gas burner with a three-ring flame heats the pan with extra power to improve energy efficiency and allow preparing your food in just minutes. An optional dedicated cast iron wok support will further improve safety, comfort, and efficiency in cooking.

The minimalist appearance of Gorenje Classico collection's kitchen hood sophisticatedly rounds off the entire kitchen ambient. Soft lines and details with gold finish make sure the hood blends harmoniously with the design of other appliances of the collection. The hood excels with efficient and silent operation. Modern trend of merging the kitchen with the living room also calls for new standards regarding hood performance. With a capacity of at least 540 m³/h, Gorenje Classico hood provides optimum power to eliminate odours, moisture, and grease particles in spaces spanning up to 55 m².

Halogen lighting

In addition to the core function of air evacuation, kitchen hoods are also an additional source of light over the cooking hob. Halogen lighting is more powerful and more energy-efficient than conventional.

Dishwasher-safe grease filters for simple cleaning

Metal grease filters in Gorenje hoods are easy to remove and to clean. They can be washed manually or in a dishwasher using a delicate programme.

Knobs and handle with gold finish

Hood design in delicate ivory or matte black is complemented by distinctive handle in the old gold colour. The knobs allow traditional control of the hood and its functions. Decorative handle that matches the design of the entire collection perfectly complements the appearance of the hood and accentuates its classical character.

WHITE. BLACK. IT'S SO ME!

Gorenje Simplicity appliance collection is designed with contemporary trends and people in mind. The line prides on logical programme selection, adaptive technology that allows adjustment to user's personal choices, excellent and uniform design, and great value of the appliance at the time of purchase and throughout its useful life.

Simplicity

Life

My life philosophy is simple. I appreciate what suits my habits and my possibilities. I design and arrange my life space in my own way. I choose the collection of appliances that respect my lifestyle. I find it easy to integrate the excellently designed appliances of the Gorenje Simplicity collection in black or white into my home. They join me in living my way. Because they adapt to me, not the other way around. Simplicity!
Beautiful. Simple. Affordable.

simplicity COLLECTION

Logical choice

In appliances of the Gorenje Simplicity collection, the most frequently used and the most convenient settings are immediately available – via a single knob.

Solid design

Pure lines, genuine materials and ergonomics allow integrating the appliances into any home.

Glass. Metal. Harmony. Presence. Eye candy.
THE WAY IT'S DESIGNED – IT'S SO ME!

Adapt tech

Advanced appliances memorize our personal
choices and suggest them next time we use them.
All that's left is to press the button to confirm.

Perfect value

As they are well-priced, these appliances offer
immediate savings. In addition, advanced technology
makes sure you only pay for what you truly need,
which leads to extra savings in the long run.

AdaptTech baking
No need to repeat your own settings

The oven will memorize your temperature setting for each preset programme and suggest the most recent or the most frequently used setting the next time you use it.

Electronic programming timer
Easy and clear touch control

The timer allows you to set the cooking time and to select the right temperature. This and the heating system currently in use can be monitored on a clearly laid out screen. Timer surface is completely smooth and easy to clean.

GentleClose
Oven door closing system

Extra comfort when closing the oven door. The door will close gently and silently, regardless of the force applied.

Preservation programme
A reliable way to make your preserves

A special preset programme will make sure your preserves keep throughout the season and well after that.

Gas cooker with SimpleOff programme timer
Safe, simple, clear, and controlled cooking

Ergonomically designed knob with built-in electronic timer allows setting the cooking time (up to 99 minutes). When the set time expires, the gas burner will be automatically switched off, which will also be indicated by an acoustic signal.

Simple control with SmartControl
Clarity and control in cooking

Cooking time can be set separately for each cooking zone. When the set time expires, the timer will automatically switch off the cooking zone and notify you with an acoustic signal.

Powerful induction hob
Fast and efficient cooking and simple cleaning

Induction hobs operate remarkably fast and efficiently to prepare excellent and wholesome food. PowerBoost function for rapid and powerful operation allows even faster and more efficient cooking which leads to savings of both time and power.
